

Practical session - CLOUDS AND ATMOSPHERIC CONVECTION

March 10th, 2021

Report due next class March 17th

For next class, I ask you to do the online METED course “**Skew-T mastery module**” whose link is given on the website (Online module on skew-T diagram) :
http://www.lmd.ens.fr/muller/TEACHING_CLOUDS/Clouds.html

You need to register to access the course (registration is free), then the link will bring you to the page where you can begin the lesson. The online course has 4 chapters, you are only required to go through **chapter 1 (Skew T description), and chapter 2 (parameters) up to Convective Inhibition (CIN) included** (you can skip Lifted Index LI and all material after that).

Throughout the online course, there are occasional questions. For those 2 chapters (up to CIN), I ask you to save (and briefly justify) your answers in a report (due next class).
